## Low pressure - The backbone of many processes

There are tens of thousands of low-pressure blowers in operation in Canada only and in a multitude of different processes such as pneumatic transport aeration basins or lagoons. Often critical to the operation of the plant, they generally operate continuously 24/7, 365 days a year; blowers are generally the highest energy consumer in all the equipment operating in a plant.

*Did you know that energy consumption accounts for over 80% of operating costs of a blower or 40 to 60 percent of the total energy bill of a factory?*

Reducing energy consumption, optimizing processes and minimizing its environmental impact while ensuring profitability illustrates the ongoing challenges faced by today's industries. Selecting the right blower technology will have a direct impact on its success and will be vital to ensure its economic survival.

## Low pressure blowers: Air supply in evolution

Blower technologies dedicated to low pressure - small flow applications (300 to 5000 m<sup>3</sup> / h) have changed very little over the past 50 years. This market traditionally covered by noisy and inefficient bi or tri-lobed blowers was the perfect opportunity for manufacturers to achieve significant improvements hence the introduction of internal compression instead of external compression blowers.

## The Low Pressure Screw Blower

Although the rotary screw compressor technology has been successfully used since the early 40s on air or gases processes (*pressure exceeding 25 psi (g)*), the low pressure screw blower (4-17 psi (g)) is a relatively new technology for the North American industry especially in water and wastewater applications.

Introduced to the market in the late 2000s by Atlas Copco, the low-pressure

screw blower is often unfairly compared to its predecessor; the lobe blower despite the fact that it differs from the latter almost in its entirety.

*The screw blower combines high efficiency comparable to adiabatic compression blowers such as the turbo or multi-stage with the simplicity and robustness of the positive displacement blowers.*

## State-of-the-art in compression

Unlike lobe blowers, the screw blower uses an internal adiabatic compression technology to reduce the volume during compression. As per illustrated below, the rotors form, during rotation, a cavity created by the two screw profiles and the casing which gradually decrease the air volume until it reaches the discharge port.

This application of thermodynamics principals to positive displacement has generated significant benefits most importantly measurable gains in energy efficiency, reliability and longevity.

## One profile - Multiple benefits

The advantages of Atlas Copco's low pressure screw blower versus conventional lobe technology are more than significant:

- Optimal energy performance and significant reduction of output temperatures.
- Significant reduction of pulsations and noise levels (below 80 dBA).
- Higher pressure capacities and maintained efficiency in turndown.
- Measured according to ISO standard 1217 Ed. 4 for measuring the air flow rate (ADF) to the output of the unit. Screw blower design flows consist of true available airflow rates at discharge, net of any loss, not intake volume.
- Screw blowers energy consumption values consist of total package power values, net of any loss, not shaft power value per traditionally available with lobe blowers.

- Integrated gearbox. (*Eliminating periodic maintenance required by the pulleys / belt drive*).
- Independent oil lubrication system with oil pump, filter and cooling tower ensuring continuous and efficient lubrication of the equipment.
- Certified ISO 8573-1 Class 0: ensuring 100% oil-free air supply eliminating all potential risk of contamination.
- Reduced maintenance costs and increased uptime.

## Energy sobriety

Combining the perfect balance between the two key design elements: reliability and energy efficiency, Atlas Copco's ZS+VSD Screw blower series with integrated variable speed drive (VSD) offer the optimum in energy efficiency.

By automatically adjusting the air flow supply to process demand, this "Plug & Play" screw blower solution saves on average 30% in energy over the conventional lobes blowers while greatly reducing installation complexity with its single point of responsibility.

Innovation is part of Atlas Copco's DNA, and we are committed to offering break-through solutions that help our customers become more productive. Atlas Copco continues to strive to create value for its customers and deliver higher productivity, smarter ergonomics, enhanced safety and improved energy efficiency.

## Magazine publishing contract renewed

Welcome to the fall edition of *Go With the Flow*. I hope everyone had a great summer, and had a chance to enjoy some vacation time. As we leave the summer season behind and look ahead to the fall, we are getting close to the ACWWA Annual Conference in St. John's, NL. I look forward to seeing you in St. John's for what promises to be a quality conference filled with the latest educational opportunities, technical tours, operator competitions, and networking events. Combine the top-quality conference programming with the warm hospitality and beautiful scenery only found in St. John's, and the ingredients are all there for a fantastic ACWWA Annual Conference.

At the Board level, in addition to ACWWA's ongoing commitment to providing members with the most

"In our ever-evolving industry, technology and regulations change rapidly, and it is critical we invest in our employees' ongoing education requirements"

current and relevant educational and training opportunities, our focus has been on the renewal of our Strategic Plan. While we have faced some challenges, the work to renew the plan continues, and I expect that this work will be completed by the end of year. We continue to work closely with our two parent organizations to ensure that ACWWA retains its strong support of the visions of both AWWA and WEF, and believe that the renewed ACWWA Strategic Plan will enhance our long-term relationships with both organizations.

I am also very pleased to report that your Board recently approved a renewal of the magazine publishing contract with our publisher, Kelman & Associates. I think it is fair to say that the first three years of this publishing arrangement have produced an enhanced magazine product for the benefit of our members. It has also transitioned the magazine from what was once a cost to the Association to one that is now producing modest incomes for ACWWA, with room to grow. This is great news, as a non-profit organization, to realize revenue streams beyond membership dues in order to be able to continue to invest in member benefits, not least of which is a quality education program.

The ACWWA fall education program has already been rolled out, and I encourage all members to take advantage of this important

training. Courses covering a wide variety of topics are scheduled in locales throughout our region this fall. Please check our website for details of the offerings this fall, and plan to attend (or send employees to attend). In our ever-evolving industry, technology and regulations change rapidly, and it is critical we invest in our employees' ongoing education requirements in order that they may stay current and provide top-quality service to water and wastewater customers.

I mentioned at the outset that our ACWWA Annual Conference is fast approaching. The conference is also where my term as ACWWA Board Chair expires. It has been my privilege to work on your behalf with a talented and motivated Board and Executive Director, and my observation is that to a person, all of the volunteers take their responsibilities seriously, and do their best for our members day in and day out. Thank you for the opportunity to serve, and I wish our incoming Chair, John Eisnor of Halifax Water, nothing but the best as he assumes his leadership position with ACWWA. We will be in good hands with John, and I know he will do a great job leading our Association over the next year.

I hope you enjoy this edition of *Go With the Flow*. If you have any comments, questions, or concerns about any ACWWA matter, please contact me at [scott.grasman@fredericton.ca](mailto:scott.grasman@fredericton.ca).

# NEMO® Progressing Cavity Pumps and TORNADO® T2 Rotary Lobe Pumps

The right pump for your job - from one source!

- Smooth operation, low pulsation and steady flow in direct proportion to speed
- Handles products with low to extremely high solids content, including abrasive material
- Perfect for shear sensitive products
- Capacities from a few gph up to 2,200 gpm
- Pressures up to 1080 psi; 3400 psi in special designs
- Wide viscosity range from 1 mPas up to 3 million mPas
- Temperatures from 5° F to 570° F
- Maintenance friendly, low life-cycle cost

- Ground-breaking timing / drive design
- Full service-in-place
- Replaceable liner and cartridge seal technology
- Lowest life cycle cost
- Exceptional performance
- Superior durability
- Compact and robust
- Low pulsation

## Networking and professional development opportunities

Welcome to the Fall 2015 edition of the ACWWA's *Go With the Flow* magazine. This excellent publication continues to help connect you with the Atlantic Canada water and wastewater industry and your peers. Enjoy the read.

The annual AWWA Annual Conference and Exhibition was held in Anaheim in June. All reports are that the event was a success and the Atlantic Canadian attendees represented us well. Unfortunately, I was unable to attend due to a labour disruption at our utility. However, the October Regional Meeting of Section Officers and the January AWWA Winter Board meetings will provide excellent venues to keep ACWWA engaged at the national level.

The final plans are in place for our showcase event,

“One of the hallmarks of ACWWA is the wide variety of quality industry-specific training courses that we provide... we have 14 separate courses lined up for the fall of 2015, covering many topics and delivered at several locations.”

the **Annual ACWWA Conference** in St. John's, NL. Great news – the **ABEA Trade Show** is already sold out, ensuring an excellent vendor/equipment supplier representation. Registration is open – sign up and join us in St. John's for an outstanding technical and networking opportunity.

With the end of summer and staff coming off vacation it is once again time to focus on professional development. One of the hallmarks of ACWWA is the wide variety of quality industry-specific **training courses** that we provide. As highlighted on the ACWWA website, we have 14 separate courses lined up for the fall of 2015, covering many topics and delivered at several locations. These programs continue to receive positive feedback from members. Check them out and sign up!

To improve the planning for future training programs, please communicate your training needs to the ACWWA office or through the training survey on our website. We want to hear from you so that we can tailor the training content, format, and locations to best meet the member's needs.

With this edition, my next one nugget of awesome 'member benefit' to highlight is access to our **webinar series**. ACWWA has recently partnered with the Illinois Section of AWWA to provide archived webinars. We have access to more than 170 wide-ranging topics which, for a modest \$25 fee, provide excellent on-site training 24/7. Please take a look and try a few of these out with your staff, and give us some feedback along the way.

I remain committed to representing our needs at the AWWA level. Please send me your comments or questions to [Jamie.hannam@halifaxwater.ca](mailto:Jamie.hannam@halifaxwater.ca).

## TOGETHER, MEETING THE CHALLENGES OF CLEAN WATER

Are you looking for ways to improve your water treatment quality, to remove more TOC and THMs, to increase your filter runs or to generate less sludge? Kemira can help you solve these challenges and much more. We aim to be a leading water chemicals supplier for raw and waste water applications, serving municipalities and water intensive industries. Together with our customers, we apply our knowledge and expertise to develop innovations that address the sustainable future of water.

## Brewing byproduct benefits

In the last couple of publications, I have tried to inform the WEF members and general public of useable bits and pieces on the WEF website. In this issue, I am giving you an interesting reprint of an article posted on the WEFCOM site. Nitrate is a concern for everyone so this is an interesting read.

As far as Atlantic Canada WEF activities, I will be attending WEFTEC in Chicago in late September and certainly encourage anyone who can attend to do so. It is likely the best trade show/conference you will ever attend. I will be meeting with the WEF House of Delegates while there and our WEF Canadian Affairs

“Nitrate is a concern for everyone so this is an interesting read.”

Council, and will update you on anything new in the next issue of the magazine.

I continue to encourage WEF membership; the resources are unending and you will find tons of useful material on the WEF website. Once you become a member, you can get a password to go deeper into the website where there is all kinds of helpful information for operators and municipalities. For now, I hope you enjoy the following article. ☺

## A bubbly solution

### *The City of Boulder, Colo., tests using beer byproduct to help reduce nitrogen*

When the City of Boulder, Colo., decided to find ways to further reduce nitrogen runoff from its water resource recovery facility (WRRF), it discovered that the answer lay in one of the least likely substances: beer. Or, more specifically, the answer lay in weak wort – a sugary, liquid byproduct of the brewing process.

#### **Being proactive**

“For years, staff at the city’s wastewater treatment facility has been evaluating ways to reduce nitrate–nitrogen levels in the wastewater without using additional chemicals,” said Cole Sigmon, wastewater process-optimization specialist at the City of Boulder.

The City of Boulder, Colo.’s water resource recovery facility estimates that it will need the equivalent of about 7,949 L (2,100 gal) of weak wort per day, which Avery’s new brewery will be able to supply. Photo courtesy of Avery Brewing Co. (Boulder).

Avery Brewing’s new tap room and restaurant has 60 taps with 30 different beers on draft. Photo courtesy of The Brewtopography Project.

“Nitrogen removal helps provide additional protection for aquatic wildlife and downstream water users.”

Avery Brewing has opened a new highly efficient, state-of-the-art brewhouse. Photo courtesy of Avery Brewing Co.

Sigmon said the city has monitored and reduced its nitrate–nitrogen levels since 2007. The city took a proactive step to remove approximately 50% of nitrogen from Boulder’s wastewater discharges before any mandated nutrient-control requirements, such as State Regulation 85, took effect. Nitrogen removal helps provide additional protection for aquatic wildlife and downstream water users. These proactive measures also have helped keep the city from violating any permit requirements for 2.5 years, Sigmon said.

The city now wants to use weak wort to help remove even more nutrients.

### Exploring options

As part of its research into ways to further reduce nitrate–nitrogen levels, city staff “explored local waste sources that might provide biodegradable carbon, such as tofu, whey, and pharmaceutical cell media,” Sigmon said.

In 2012, city staff tested samples of Avery Brewing Co.’s (Boulder, Colo.) weak wort, Sigmon said. Based on laboratory-scale experiments, the city determined this byproduct includes the high levels of biodegradable carbon needed to help feed the microorganisms that break down and reduce nitrogen compounds in wastewater, he explained.

Avery Brewing’s lab tests beers 20 times from grain to glass. Microbiologists and chemists use lab equipment to determine the cell count, cell size, viability, and vitality of the brewer’s yeast and measure the color, bitterness, and diacetyl of beer to maintain high quality and consistency. Photo courtesy of Avery Brewing Co.

In early 2014, city staff worked with Avery brewers to transport more than 45,000 L (12,000 gal) of the weak wort to the WRRF for larger-scale testing. The testing was funded by a \$1 million Colorado Department of Public Health and Environment grant to improve nitrogen reduction. The larger-scale tests successfully removed additional nitrate–nitrogen from the wastewater.

Using weak wort to remove nitrate–nitrogen from the community’s wastewater is the most sustainable and cost-effective solution that city staff has identified, Sigmon said. “Using the weak wort twice a week, with daily savings of \$500, would result in an estimated annual savings of \$52,000,” he said.

Since late 2014, city staff and Avery Brewing representatives have participated in a series of informal, verbal discussions about possible future collaboration. They have discussed the potential for contract liquid haulers to transport liquid weak wort in 22,700 L (6,000 gal) loads from Avery’s new brewery in Gunbarrel, Colo., to the Boulder WRRF, located less than 4.8 km (3 mi) away. City staff then could use the brewing byproducts to treat wastewater, instead of buying and using additional chemicals. 🌊

## CWWA – Working for you at the national level

There have been exciting developments this year as the value of working on national initiatives is resulting in positive outcomes.

CWWA and the Canadian sections of AWWA conducted a national survey of utility leaders in Canada to ask what they perceived as the most important challenges they face when it comes to infrastructure renewal. The stated intent of the survey was to gain a better understanding of the opportunities and barriers in Canada towards helping local governments, First Nations, and utilities ensure adequate funding is in place to operate, maintain, upgrade, and replace water and wastewater infrastructure. Approximately 400 responded, with almost a 50/50 response outcome from communities with populations of fewer than 10,000 and those with more than 10,000. The main concerns expressed by the Canadian utility leaders from the survey are summarized below:

- Lack of confidence in the reliability of cost information and funding
- Unpredictability of federal and provincial grant programs
- Lack of sufficient reserves in their communities
- Natural disasters
- New regulations

As for a Canada-wide initiative, the overwhelming message expressed in the survey was for action towards “*Educating the decision-makers and the public.*”

I am pleased to report that CWWA has two collaborative projects currently underway to support the need for educating elected officials and advancing public awareness of the importance of water and wastewater infrastructure.

CWWA collaborated with Water Canada to develop the 2015 Public Attitudes Project, which has just been released this past June. The goal of the project is to provide a framework to help influence or change public attitude, with a focus of educating and messaging that stresses the importance of infrastructure and needs. I encourage all water and wastewater professionals in Atlantic Canada to view the report and hope it will be useful in the development of your water and wastewater challenges. The report can be viewed at [www.cwwa.ca](http://www.cwwa.ca).

A working group with reps from all the Canadian AWWA and WEF sections has been established to develop tools and resources that utilities can use to educate and engage decision-makers on the basics of asset management and infrastructure renewal.

“CWWA has two collaborative projects currently underway to support the need for educating elected officials and advancing public awareness of the importance of water and wastewater infrastructure.”

Another national initiative that warrants mention is CWWA’s First National Water and Wastewater Conference in Whistler, B.C., October 25–28, 2015. This event will bring together professionals in the areas of drinking water, wastewater, water security, water and energy efficiency, biosolids, and climate change. It will be the first time CWWA will bring together nationally all these players to discuss all aspects of water and wastewater management at one event. It will help build new collaborations and relationships, and give the water and wastewater sector a stronger national voice. CWWA will also hold its 2015 Annual General Meeting in conjunction with the conference.

With the above new event strategy set for October in Whistler, it was decided to move the annual ‘Window on Ottawa’ event to June 2016. Please mark your calendars now for the next ‘Window on Ottawa’ event scheduled for June 8–9, 2016 at the Albert at Bay Suites Hotel in Ottawa.

This will be my last time reporting on CWWA affairs in this section of the magazine, as my term as both Director of Government Relations and CWWA Director ends this fall at our annual conference and annual meeting. It has been truly a tremendous honour and privilege to serve and represent ACWWA on the Board of Directors of CWWA. I appreciate the support and encouragement received throughout my term. In closing, thanks again and best wishes for the future.

Should any other information be required on CWWA activities or initiatives, please do not hesitate to contact me directly at [roland.richard@nb.sympatico.ca](mailto:roland.richard@nb.sympatico.ca) or visit the CWWA website at [www.cwwa.ca](http://www.cwwa.ca).

**Mark your calendars for the first CWWA National Water and Wastewater Conference – October 25–28, 2015 in Whistler, British Columbia. Details on the program and venue can be found at [www.cwwa.ca](http://www.cwwa.ca).** 

Wet Well Mounted Pump Station

# PUMPING NEVER LOOKED SO GOOD.

When you've got the finest-engineered, most cost-efficient pump station on the planet, it's hard not to gaze in admiration — especially when you can see it because it's safely above-grade. (Try doing that with a submersible.)

- S&L Non-Clog Pumps above-grade - *Operator Safe*
- Long-lasting performance (3x Longer than submersibles)
- 50% cost operational/maintenance savings year after year

Take pride in your pump station.

# Fine Tuners

## Finicky, Fastidious and Fussy

In common with most water engineers we meet, at Hydro we are shamelessly persistent in fine-tuning the best from our technology. Obsessing over the finest details is essential for optimum design and operation.

Using the proven principles of Advanced Grit Management®, we demand 85-95% removal of grit entering wastewater treatment plants. In a small footprint, the Eutek HeadCell® protects downstream processes from abrasion and deposition so the plant functions as designed.

# Winner of the **Silent Hero Award**, Gerald Noseworthy

1. **Job title:** Town Foreman.
2. **Who do you work for?** Town of Pouch Cove, in Pouch Cove, NL.
3. **Where do you currently live?** Pouch Cove, NL.
4. **Where did you grow up?** Pouch Cove, NL.
5. **When I'm not working, I'm...** Tinkering in my workshop, working on my house, relaxing.
6. **If you could go on a road trip with any one person (living or dead), who would it be and where would you go?** David Suzuki is a person I greatly admire. His committed dedication to environmental issues is inspirational. Dr. Suzuki has a manner of presenting even the most important issues in such a way that even the unaware can understand. He makes you want to be a more earth-friendly person. I would be happy to accompany Dr. Suzuki on any of his explorations!
7. **What is your philosophy on life?** I have two: live and let live; it is what it is.
8. **Toughest thing about your job?** The toughest thing about my job is liaising between the general public, the office staff, and the Council.

9. **When you were a kid, what did you want to be when you grew up?** A forestry technician.
10. **Last book you read?** *The Maze Runner* trilogy, by James Dashner.
11. **Last movie you saw?** Divergent.
12. **What music did you listen to this morning?** Country rock – oldies.
13. **Favourite TV show?** I don't have one favourite, but I enjoy *The Nature of Things*, *National Geographic*, that sort of thing.
14. **What was the best gift you ever received?** My ride-on lawn mower!
15. **What is the most useless thing you ever purchased?** My first car! It was a 1962 Plymouth.
16. **What attracted you to the water/wastewater industry?** When the system was initially being installed in Pouch Cove, I became extremely interested in the entire process and wanted to learn more. As the infrastructure expanded, so did my interest and knowledge. I'm still learning...
17. **What is your greatest luxury?** I've been known to indulge in a bottle of 25-year-old port.
18. **What is your favorite famous quote?** I have many, but perhaps my favourite is from comedian

Ron White: "You can't fix stupid; stupid is forever."

19. **Describe your perfect day.** A perfect workday would be that elusive day when all can go ahead as planned and can be accomplished and finished without interruption, delay, or problems! A perfect day off would include relaxing with family and friends.
20. **What three objects would you rescue from your burning house?** Provided that all members of the house were out, I would try to rescue some collected mementoes from my past, my parents and children, a few art objects that really matter, and personal papers/documents.
21. **What do you like most about your job?** That every day presents new challenges!
22. **What is your ideal vehicle?** 1966 Pontiac GTO.
23. **What is your favorite travel destination?** We have a house in Prince Edward Island. I really enjoy going and being there – in all seasons. 🌊

# THE PIPE THAT FITS IN SO MANY WAYS.

## NovaForm™ PVC Liner

**The sewer & culvert rehabilitation solution in the sizes you need.**

Aging sewer and water infrastructure has led to ever increasing maintenance costs for municipalities. The engineers at IPEX recognized this development and responded with NovaForm PVC Liner, a product that brings the benefits of factory-made PVC pipe to the North American trenchless pipe rehabilitation industry.

### **A Size for Every Job**

Available in the sizes you need: 6" to 30" and industry-standard dimension ratios DR 35 and DR 41.

### **Durability of PVC**

Excellent chemical and abrasion resistant properties.

### **Consistent Production**

Factory-made, quality-controlled and tested to stringent ASTM standards.

### **Peace of Mind**

IPEX has been a leading manufacturer of PVC piping systems for more than 50 years and developing trenchless PVC solutions for the past 20 years. Plus, we back everything we sell with in-field technical support throughout North America.

To learn more, call us toll free at 1-866-473-9462  
or visit [www.ipexinc.com](http://www.ipexinc.com)

Products manufactured by IPEX Inc. NovaForm™ is a trademark of IPEX Branding Inc.

## Join us in St. John's

Featured again in this edition of *Go With the Flow* is our annual conference. If you have not had a chance to get to the conference, then now is the time! Plus you will get to explore the beautiful City of St. John's, NL. How can you stay home? The conference is an excellent opportunity to reconnect with colleagues and meet new ones. You can share stories and experiences and of course many laughs. When I am asked about the benefits of being an ACWWA member, I can list a whole lot of things but topping the list every time is having the opportunity to network with other professionals in the field of water and wastewater.

As you have hopefully seen via email or in the last edition of this magazine, we had so much success with the Photo Contest that we are doing it again this year. The deadline for submissions is at the end of August. Remember, all you need in the picture is water and an ACWWA member (or family member or pet). How easy can this be? Plus, I'm sure you all have snow mountain photos that you want to share. 

"The conference is an excellent opportunity to reconnect with colleagues and meet new ones."

### A big welcome to our new members over the past few months:

| Name              | Company                                     |      |

## PHOTO CONTEST

# Your Family and Water

### Rules and criteria:

1. Photo must be submitted by an ACWWA member.
2. Photo must include water AND a family member(s) and/or pet(s).
3. Please provide first name of those in photo.
4. Unlimited submissions.
5. Judged by Membership Committee.
6. Submit pictures or questions to amyw@cbcl.ca.

# OUR COMPLIANCE IS YOUR ASSURANCE.

## MSU

1. CSA Certified Welding Procedures ✓
2. Semi Annual Canadian Welding Bureau third party audit ✓
3. CSA Certified Welders, tested every two years on every procedure ✓
4. Compliant with CSA S157 Strength in Aluminum Design, Building Codes, Bridge Codes ✓

## THE OTHER GUYS

Think it is no big deal when contracts are awarded to a foreign or “here today, gone tomorrow” supplier? You may get treated well. You could save money. So what if they’re non-compliant? Nobody’s enforcing the standards, right? But compliance isn’t about enforcement. It’s about liability. When something goes wrong, are you sure you won’t be liable?

MSU is certified by the Canadian Welding Bureau to CSA standards W47.1 and W47.2. All MSU welders are certified to CSA standards W59.1 and W59.2 Our work and products meet the most exacting requirements and the highest industry standards.

**Work with MSU – our compliance is your assurance.**

## YP Committee update

By Brad McIlwain, EIT, M.A.Sc

The YPs had a busy start to the summer of 2015. In May, the YP Committee hosted the Annual Blue Drinks Speaker Series. The event was held at the T-Room bar at Dalhousie and featured three great presentations. Timothy Bachiu, Fresh Ideas contest winner from the 2014 Annual Conference, started off the presentations with a discussion about watershed studies that were conducted in Halifax and how these studies have assisted in development planning. John Eisnor then gave a presentation about the emergency repairs that were executed at the Lake Major dam. The presentation described the history of the project and the substantial coordination efforts that were involved in completing the repairs. Our final speaker, Dr. Gordon Price, presented findings of a study that evaluated electrocoagulation as a process for treating mussel wash water. The YP Committee was very fortunate to line up these three great presenters for the event, and we would like to thank them for donating their time and for making the event such a great success.

“In June, many YPs were out on the field with their teams for the annual Water For People softball tournament.”

In June, many YPs were out on the field with their teams for the annual Water For People softball tournament. This year's tournament was another big success, as a substantial amount of money was raised for the charity, we had terrific weather, and all participants had a great time. Six teams battled it out on the field: CBCL Limited, two Stantec teams, SNC Lavalin, Dalhousie University, and Dillon. Stantec Black & Blue beat Stantec Red in the final game to win the championship. The event was followed up with an after-party at Garrison Brewery, which gave a great opportunity for rivals from the field to meet up and reconcile their differences over a cold drink. Thanks to everyone who was able to make it out to this year's tournament, and we hope even more people are already planning their rosters for next year.

The YP Committee will continue to hold events throughout the summer and into the fall, including the YP Mixer at this year's Annual Conference in St. John's, NL. More updates will be sent out in our monthly YP Newsletter. For anyone who is looking to become more involved with YP activities, please contact Brad McIlwain ([bmcilwain@cbcl.ca](mailto:bmcilwain@cbcl.ca)). 

WATERTRAX EMS REPORTING TOOL

**WINNER** water's next

2015 Technology Award for Water Resources

for its use in reporting to the  
BC Ministry of Environment.

## ABEA Scholarship winners & upcoming events

We would like to begin with congratulations to our 2015 recipients of the ABEA Scholarship:

*Claire Reardon, daughter to Terry Reardon of Atlantic Purification Systems in Dartmouth.*

Claire will be attending Dalhousie University in Halifax this fall, where she will pursue her degree in Medical Sciences, for someday becoming a doctor. Congratulations Claire, and we hope to see you become a successful doctor!

*Jarod Monk, son to Damien Monk of IPEX Inc. in New Brunswick.*

Jarod will be attending Mount Allison University in Sackville, New Brunswick, where he was accepted into the Fine Arts Program to obtain a Bachelor of Fine Arts & Drama Studies. Jarod is looking to pursue a career in arts and theatre, not only working on stage as an actor, but behind the scenes directing. Congratulations Jarod, and hope to see you acting or directing the act!

*Twins Liam and Grace Pyke, son and daughter to Stephen Pyke of OPUS Engineering in Fredericton, and also siblings to Charlotte Pyke, our 2013 ABEA Scholarship winner.*

Liam will be attending the University of New Brunswick - Fredericton this fall, where he will be pursuing a degree in Kinesiology. Liam is a highly active individual, and would like to help others get on a healthier track. Congratulations Liam, and we are sure we will all be looking for some advice on a healthier lifestyle.

Grace will be attending Memorial University in St. John's, Newfoundland this fall, where she will be pursuing a Bachelor of Engineering Science. Grace believes in the powers of engineering, the innovations and technologies that will push the world forward. She would love to work with Engineers Without Borders, working locally and globally, helping those around the world. Congratulations Grace; we can't wait to see what the world of change in which you will engineer!

Before moving on we would like to shout out to Charlotte Pyke and Christian Oxner, our 2013/2014 Scholarship recipients; we hope all is going exceptionally well for you!

Monday, October 5 will see the ABEA host their annual Hospitality Suite at O'Reilly's Pub on George Street, 9:00 PM until closing. It is going to be a fun, sociable time!

Plan to attend the Annual ABEA Tradeshow at the ACWWA Conference, Tuesday, October 6, 2015 where the exhibitors will be displaying current and newly innovated products to the water & wastewater industry. The Tradeshow will be running from 9 AM until 1:00 PM. See you all there!

Once again the ABEA, and its membership, will be sponsoring the Annual Golf Tournament at Clovelly, the Osprey on Sunday, October 4. Tee times will begin at 9:30, so please make sure you check the box on your registration forms to join us. It will be a premier event that you will not want to miss... hope to you see you all on the course! 

Claire Reardon

Jarod Monk

Liam & Grace Pyke

For other updates on the ABEA, its members, and its affiliates, please check out our Facebook, Twitter, and LinkedIn pages, where you can find the most up-to-date information.

# Congratulations to Fuller Award Winner Jamie Hannam

Jamie Hannam, MBA, P. Eng.  
Director, Engineering & Information Services, Halifax Water

1. **What is your job title?** Director, Engineering & Information Services.
2. **Who do you work for?** Halifax Regional Water Commission.
3. **Where do you currently live?** The Bridgeview area of Halifax.
4. **Where did you grow up?** Prince Edward Island.
5. **What's the toughest thing about your job?** Ensuring the customers understand the value of water and wastewater services.

### Finish these sentences:

6. **"When I'm not working, I'm..."** At the cottage in PEI in the summer, playing hockey in the winter, and lots of dog walking in between.
7. **"The accomplishment I'm most proud of is..."** Raising two boys and getting them to university.
8. **"When I was a kid, I wanted to be \_\_\_\_\_ when I grew up."** A dentist or an architect, until the engineering kicked in.

9. **"Not many people know I can...."** Juggle (no chain saws).

### What is...

10. **the last book you read?** Bruce Springsteen biography.
11. **the last movie you saw?** Re-run of Chevy Chase's Summer Vacation.
12. **your favourite TV show?** Seinfeld.
13. **your guilty pleasure?** Cheeseburger, fries, and a cold beer.
14. **the song or story you remember from the radio this morning?** Warren Zevon – Werewolves of London.
15. **the most useless thing you have ever purchased?** A 1996 Dodge Caravan.
16. **If you could go on a road trip with any one person, living or dead, who would it be and where would you go? (and what would be in the CD player).** That's easy, with my wife, down any road that ends with a beach. 🌊

water for people

# Water For People events

In continuing with a long-running tradition, the Atlantic Canada chapter of Water For People hosted the annual softball tournament. The tournament was held on Saturday, June 27 at the Maybank Fields in Dartmouth. Six teams participated in the tournament from Dalhousie, CBCL, Dillon, SNC-Lavalin, and Stantec (with two teams). The tournament was followed by a Garrison Brewery Tour, hosted by the ACWWA Young Professionals committee.

Each team donated an item for the silent auction to be held at the annual ACWWA conference in St. John's, NL from October 4 to 7, 2015. In addition to these items,

tournament registration fees and the BBQ canteen raised about \$1,500 for Water For People. Stantec (blue team) won the tournament and Stantec (red team) won the door prize of \$100 towards a Salvatores pizza party.

Thanks to Brad McIlwain and Sean MacIsaac for coordinating the activities on the day of the event and to all participants.

Be sure to sign up for the Water For People 'Fun Run' when making your annual ACWWA conference arrangements. If you would like more information on how to become more involved with Water For People, please contact Matt Follett at [Matthew.Follett@snclavalin.com](mailto:Matthew.Follett@snclavalin.com).

## Solutions for Wastewater Treatment

### Multiparameter Mixed Liquor Analysers

- Single, dual & multi channel
- Digital communication interface with sensors
- Self cleaning sensors

### Dissolved Oxygen Analysers

- Fluorescence technology
- No membranes
- No disposable cartridges

### Total Suspended Solids Analysers

- Infrared technology
- Portable and fixed versions

### pH, ORP

- Smart sensors & built-in self cleaning port

### Sludge Retention Time (SRT) Controllers

- PC based - OPC interface with SCADA
- Maintain target SRT
- SRT/DO set point optimization

### Ultrasonic Interface Analysers

- Smart sensors reduced cabling costs
- Up to 128 sensors on a MODBUS RS485 network
- Field mountable controller for settling profile viewing
- ZigBee compliant wireless communications available
- HART, Profibus and Foundation Field Bus protocols forthcoming

### Wastewater Samplers

- High sample repeatability
- Portable and fixed systems
- Refrigerated or non refrigerated

### Septage Receiving Systems

- Control, analysis, visualisation and management of volumetric and weighscale systems for liquids and solids vehicle reception facilities

### SUNDAY, OCTOBER 4

**9:30 am**  
ACWWA Golf Tournament

**1:00 pm**  
Technical Tour  
– Bay Bulls Big Pond  
Water Treatment Plant

Dissolved Air Flotation Facility

**5:30 pm**  
Young Professional Mixer  
  
Gypsy Tea Room – Water Street

**7:30 pm**  
Meet and Greet Reception –  
Harbourview Ballroom

### MONDAY, OCTOBER 5

**8:00 am**  
Official Conference Opening

Fuller / Bedell/ MacNab  
Awards Ceremony

Keynote Speaker – Gwynne Dyer

**11:45 am**  
Annual General Meeting Luncheon

**3:15 pm**  
Top Ops Competitions

**5:00 pm**  
Water For People – Fun Walk (or Run)  
  
Quidi Vidi Lake – single loop = 3.85 km

**6:00 pm**  
Dine on Your Own

**9:00 pm**  
ABEA Hospitality Night  
– George Street

### TUESDAY, OCTOBER 6

**7:30 am**  
Best of the Best Water Taste Test

**8:00 am**  
ACWWA Awards Breakfast

**9:00 am**  
ABEA Tradeshow

**6:30 pm**  
Water Works Club Reception

**7:00 pm**

#### CONFERENCE INFORMATION

Full conference has a 1.5 CEU value.

#### TRADE SHOW INFORMATION

Each booth measures 8' x 10' in the main ballroom and 6' x 10' in the hallway/lobby. Booth selection will be online and first come first-served. ABEA members will have exclusive access for one week prior to general public. Contact the ABEA to learn more about becoming an ABEA member, Cathy Cameron at [scotiotech.main@ns.sympatico.ca](mailto:scotiotech.main@ns.sympatico.ca). For trade show questions contact Steve Philpott at [steve.philpott@canadapipe.com](mailto:steve.philpott@canadapipe.com).

#### ACWWA CANCELLATION POLICY

Cancellations must be received in writing, on company letterhead, and faxed, mailed or emailed to the ACWWA Office. Phone cancellations are not accepted. All cancellations postmarked/fax-dated 14 days in advance of the conference start date will receive a full refund, minus a 10% administrative fee. Cancellations between 7 and 14 days of the conference start will receive a 50% refund. Cancellations less than 7 days in advance of conference will not be refunded. Please note that substitute registrants are welcome. Fax requests for substitutions or cancellations to (902) 435-7796 or email to [contact@acwwa.ca](mailto:contact@acwwa.ca).

# ACWWA 2015 Taste Test Entry Form

Date: Friday, September 25, 2015  
Location: Delta Hotel

Entry forms must be received by Friday, September 25, 2015. Water samples will be accepted at the Registration Desk during Registration hours. All samples must be received PRIOR TO Friday, September 25, 2015 at 5 PM. Two samples should be collected, each in a 1-liter container. While you can use any type of container, the suggested use is a glass, Teflon-capped container with no air at the top and a small opening for easy pouring. Each container should clearly identify the name of the water system. A representative of the water system must be present at the conference for eligibility in the competition.

|   |  |
|---|--|
| <b>Official Water System Name:</b>  |  |
| <b>Water System Address:</b>  |  |
| <b>Contact Name:</b>  |  |
| <b>Contact E-mail:</b>  |  |
| <b>Contact Phone:</b>   |  |
| <b>On-Site Representative and Contact Info (if different from above)</b>  |  |
| <b>Treatment and Source Water</b> (for ACWWA information only – this will not be made available to the judges)  |  |
| <b>Water Description:</b> for entertainment purposes only, will not be read with related water sample, but there will be a prize for best description |  |

*\*\* All entries must have incurred no provincial or federal drinking water violations during the last twelve months\*\**

## THE TOP THREE WATER SYSTEMS WILL BE GIVEN AWARDS

The First Place Winner will be entered in the 2016 AWWA “Best of the Best” Taste Test Competition in Chicago, IL!

Please return this entry form by Friday, September 25, 2015 to Deborah Smith at [dsmith@stjohns.ca](mailto:dsmith@stjohns.ca)

For general questions about the 2015 ACWWA Taste Test please call Deborah Smith at 709-745-1870 or e-mail at [dsmith@stjohns.ca](mailto:dsmith@stjohns.ca)

# Intermittent operation | an irresistible attraction?

Operating wastewater treatment plant processes or equipment intermittently offers the irresistible attraction of reduced energy costs. But take the practice too far, or in the wrong circumstances, and treatment processes can be damaged as a result. Marcia Sherony, National Sales Manager of Hydro International, looks at the trend to introduce intermittent plant operation in some processes in wastewater treatment. Using grit removal as an example, she considers the opportunities and pitfalls.

The cost of energy is a constant consideration on the operating budget of plant operators. Public facilities that treat and distribute drinking water and those that collect and treat wastewater are energy-intensive, accounting for approximately three percent of U.S. electricity use (approximately 100 billion kWh annually)<sup>1</sup>.

For local governments, this level of consumption means that water and wastewater facilities are one of the largest and most energy intensive loads they own and operate, representing up to 35% of municipal energy use<sup>2</sup>. Wastewater facilities in particular have a wide variety of processes and associated equipment that consume energy.

The equipment and processes used in treatment plant operation, and the amount of energy they use, vary significantly reflecting the regional topography and environmental conditions and requirements to treat certain types or concentrations of waste.

## Looking for savings in energy usage

Any plant operator tasked with auditing wastewater processes to isolate the biggest energy consumers and identify operational efficiencies faces conflicting priorities. Both operators and engineering designers are motivated firstly by maintaining or improving the availability and reliability of their facilities. Any energy-efficiency opportunities have to be considered within this context.

A waste treatment plant engineer knows that motors and motor-driven equipment use a significant amount of energy to pump, filter, and aerate water. Indeed, wastewater aeration, pumping and solids processing account for a significant amount of the electricity used in wastewater treatment. Approximately 42,000 wastewater pumping stations across the country operate to meet continuous and varying wastewater flows and typically, pumps are the most prominent energy consumers.

However, each piece of equipment is part of an integrated system.

Therefore, it is important to consider facility performance when introducing energy-efficiency measures and to determine which measure or combination of measures will result in the biggest energy reduction for a given investment, and avoid degradation in performance.

Frequent targets of cost-cutting audits are pumps and the subsequent activated sludge treatment process. Both processes can be energy-intensive in many plants. For example in a typical activated sludge treatment plant, the aeration system typically represents 60% of a plant's electricity use; pumping represents an additional 15%, of which grit slurry pumping is a small part.

### Grit system considerations

It is tempting to think that diurnal flow variations and wet versus dry weather variations in incoming waste water flow volumes might be met with intermittent grit pumping schedules. While plants should continue to reduce electricity consumption where possible, balancing the system performance efficiency and operation of any other downstream treatment processes must also be considered. The loss of digester performance and aeration basin efficiency, along with the time and expense to clean either, can quickly offset any savings realized by running the grit pump intermittently.

As there are no industry guidelines available for intermittent running of grit pumps, careful and continuous attention to flow and incoming grit load is required and intermittent operation is often not suited to many plants and locations for a variety of considerations including flows, collection system design, condition of the collection system, and grit loading.

Continuous grit pumping is recommended in many

applications to ensure that elevated grit loads and wet weather events are covered when higher grit volumes can be expected. It is also important that total solids in pumped grit slurry remains at approximately 1% or below, otherwise washing and dewatering equipment efficiency can degrade and risk plugging, as can piping.

Where conditions allow, it is possible to consider intermittent pump operation, which should always be assessed by an expert. For example, it could be used if the range between the peak and average flow is very great, (i.e., high wet weather flow spikes) or there are very low overnight incoming flows with small grit loadings such as may occur at small plants. However, the entire grit system must be designed to handle the build-up of grit that will occur with intermittent operation.

When operating the grit system intermittently, it is advisable that continuous operation is still enabled during wet weather events. This can be achieved either by influent flow sensing triggered by a set point for automatically switching between continuous and intermittent operation, or a manual control switch with timed intervals during dry weather and continuous during wet. The latter carries a certain risk if not well attended.

High-performance grit separation system can be optimized for intermittent flows. In the latest developments of the Eutek HeadCell® for example, an expanded grit underflow collector allows grit to inventory while the pump is not operating. Flexible grit pump operation can be optimized by plant operations personnel based on grit load and plant demand while minimizing energy consumption. Intermittent pump operation can also reduce plant use of non-potable water associated with the grit washing/dewatering system components as these components typically run in tandem with the grit pump.

### Design implications

In other grit collection technologies, energy usage is dependent on the process design as well as the operating equipment. For example, aerated grit basins can be a significant source of power consumption due to the blowers used to supply air to diffusers located in the basin. Aeration basins typically have a recommended air delivery rate of three to eight cfm of basin length, where the basin length is the standard three to eight times its width, and designed for a detention time of three minutes at peak flow. This means that a typical basin of 55 ft length, and a width of 7 ft to 18 ft, could require 165 to 440 cfm of air, and need up to 100HP of power to drive the air compressor. There are, of course, far bigger basins which require more air and higher power to produce it.

The next power user in a grit system is typically the grit pump and any potential saving through intermittent operation would be attractive. However, will intermittent pump operation impact the grit – or other subsequent processes? Combined sewer plants and plants with large peak to average flow ratios will see a significant increase in grit load at higher flows.

Grit quantities are typically reported to range from 0.53-24 ft<sup>3</sup>/mgal (M&E) and operating grit pumps intermittently during high influent loadings can be detrimental to the grit removal process and cause plugging, loss of grit, and system failure. Pumping intermittently increases the concentration of the grit slurry as well as the problematic debris accumulated in the grit sump and grit slurry piping.

In fact, even without intermittent pump operation, the lack of sound design guidance may contribute to the problems met in removing, conveying, and processing grit slurry at many treatment facilities; combined sewer collection systems are particularly prone. It is ironic that this process is intended to prevent or reduce downstream

## NEW 15,000 ft<sup>2</sup> LOCATION

Our new 15,000 ft<sup>2</sup> location combines both of our Moncton, NB operations under one roof.

### Marathon Service Centre

Our service centre, previously known as Jim's Pump Shop is available to service and repair all pump manufacturers and types.

We are now offering Preventative Maintenance Agreements (PMA's) for all industries and pump types at your site. Call us to customize a PMA to your needs.

### Marathon Custom Design

Our team of engineers and highly qualified tradesmen will create your custom booster station, chemical feed system and/or liquid transfer system — taking it from inception, to design, to installation. Call us today.

Focus | Commitment | Experience | Performance

maintenance, but often is fraught with its own frequent maintenance issues such as plugged grit slurry collection sumps, plugged grit slurry piping, failed grit slurry pumps, and plugged grit slurry concentrators. Intermittent operation will only exacerbate such problems.

### Careful conclusion

While decisions to run equipment like pumps, including grit pumps, intermittently can save electricity and lower energy costs, care must be taken to match the operating schedule to plant inflow conditions. Careful assessment, and the right grit removal equipment, will greatly reduce the risks of extra costs incurred through ineffective removal using conventional technologies or intermittently pumping decisions influenced solely by the desire to cut the dollars.

Consulting closely with engineering designers and equipment manufacturers is therefore essential to take advantage of the opportunities of intermittent operation without running unnecessary risks.

**Hydro**  
International

Hydro International provides cost-effective solutions for controlling the quantity and improving the quality of water with minimal maintenance. Developed over more than 30 years of research and development, many of Hydro's award-winning solutions in the water, wastewater, and stormwater sectors are based on sustainable vortex technologies.

# Atlantic Canada Water and Wastewater Association (ACWWA) Lloyd Douglas Scholarship (2015 Competition)

The Atlantic Canada Water and Wastewater Association (ACWWA) established this scholarship in 2010 in recognition of dedicated service rendered by long-time member and tireless ACWWA supporter, Lloyd Douglas. ACWWA is a 'Section' of the **American Water Works Association (AWWA)** and a 'Member Association' of **Water Environment Federation (WEF)**. ACWWA is comprised of over 550 water professionals from Atlantic Canada representing the water and wastewater industry from a number of disciplines including **System Design & Consulting, Utility Management & Operations, Academia & Students, and Service Providers & Contractors**. The goals of the association under its **Strategic Plan** are to:

- **Support** industry best practices
- **Provide** our industry with an education for the future
- **Promote** information exchange in the water and wastewater industry
- **Conduct** annual conferences
- **Enhance** government relations
- **Increase/optimize** membership
- **Improve** our Association's effectiveness

**Number and value:** Up to four awards with a value of \$1,000 each (one for each Atlantic Canadian province: NB, NL, NS, and PEI)

**Tenure:** One year (non-renewable)

**Eligibility:** An applicant shall

- be a Canadian citizen or permanent resident of Canada;
- be registered as a full-time student in a postsecondary institution in Atlantic Canada;
- have successfully completed at least one year of postsecondary education; and
- intend to pursue a career related to the water or wastewater industry.

**Fields of study:** University degree in engineering/science or college diploma in water/wastewater field.

**Assessment criteria:**

- Academic record after at least one year completion of postsecondary education (30%);
  - Statement/essay (60%); and
  - Work experience and extracurricular activities (10%).
- Preference will be given to a candidate with a demonstrated interest in working in the water or wastewater treatment sectors.

**Application:** The application shall include

- a short biography, a recent photo and contact information including name, phone number, mailing and email addresses;
- a 500-word statement or essay of the applicant's interest, knowledge and future goals in the water/

wastewater industry together with applicable work experience or extracurricular activities;

- a description/list of planned future studies; and
- supporting documents including i) an official transcript completed to date, and ii) a copy of passport (the page showing your name, nationality, and place of birth), citizenship/PR certificate or birth certificate.

The Scholarships Committee **accepts only electronic application** which should be received via email by **October 12, 2015**. Scanned copies of the supporting documents are required. The original copy of official transcripts may be directly mailed by the institution.

**Apply to:**

Dr. Bing Chen,  
Chair of ACWWA Scholarships Committee  
Faculty of Engineering and Applied Science  
Memorial University of Newfoundland  
St. John's, NL, Canada, A1B 3X5  
Email: [bingchen05@gmail.com](mailto:bingchen05@gmail.com)

**Selection:** Selection will be based on the principle of open and equal opportunity and carried out by the Scholarships Committee. The award winners will be announced in the following January/February. 

## Water Environment Research article examines the occurrence of pharmaceuticals in Calgary's wastewater and related surface water

The open access article for the May 2015 issue of *Water Environment Research (WER)* examines the ability of Calgary's water resource recovery facilities to remove pharmaceuticals during the treatment phase. The authors found that although the facilities were not designed to remove these types of contaminants, a recordable amount was removed in the aqueous stage.

According to WER Editor-in-Chief Tim Ellis, "the authors looked at the removal of 15

pharmaceutical compounds in Calgary's wastewater treatment facilities and found that effluent concentrations were in the low parts per trillion to low parts per billion range, while treatment removal rates ranged from 99.5% for caffeine to nearly zero for carbamazepine. Despite measurable downstream surface water concentrations of many of the target compounds, comparison to toxicological data suggested little risk for adverse environmental effects."

Selected WER articles such as this one are available free to the public on a monthly basis through an open-access program. Go to <http://www.ingentaconnect.com/content/wef/wer/2015/00000087/00000005/art00004> to download the open access article, 'Occurrence of Pharmaceuticals in Calgary's Wastewater and Related Surface Water,' by M. Chen, V.I. Cooper, J. Deng, P.L. Amatya, D. Ambrus, S. Dong, N. Stalker, C. Bonilla-Nadeau, and J. Patel.

Published by the Water Environment Federation (WEF) since 1928, WER is a popular professional journal that features peer-reviewed research papers and research notes, as well as state-of-the-art and critical reviews on original, fundamental, and applied research in all scientific and technical areas related to water quality, pollution control, and management.

Originally known as the *Sewage Works Journal*, WER is available in both print and online formats and receives approximately 400 new research submissions each year.

## Engineering and Environmental Design and Consulting

## Cyanotoxins guide targets blooming issue

Source: [awwa.org](http://awwa.org)

The American Water Works Association and the Water Research Foundation have released a guide to help water utility managers detect and control cyanotoxins, the algae-related contaminants that led to a 'do not drink' advisory for 400,000 people in Toledo, Ohio, last summer.

'A Water Utility Manager's Guide to Cyanotoxins' addresses cyanotoxin occurrence, source water management, and treatment strategies. Presented in a simple Q&A format, it is available for free download from both the AWWA and WRF websites. A more technical companion document is also in development.

Cyanotoxins typically arise from cyanobacteria – often referred to as blue-green algae in lakes and reservoirs and can

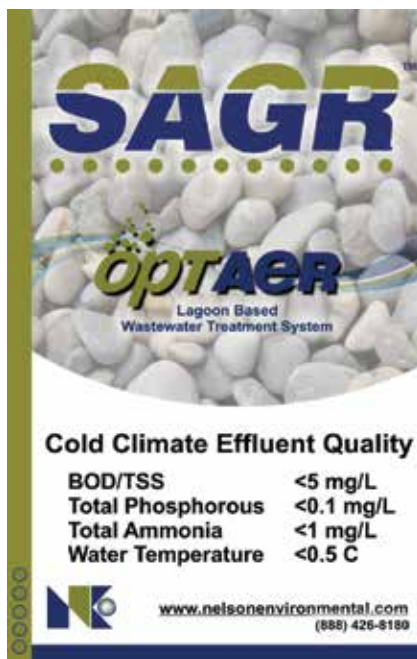

impact drinking water quality. While health effects from drinking water contaminated by cyanotoxins are not well understood, potential negative health impacts of prolonged or very high exposures include liver, nervous system, and gastrointestinal problems.

The guide comes as the federal government considers how to address cyanotoxins from both regulatory and legislative perspectives. The U.S. Environmental Protection Agency is expected to publish a health advisory on cyanotoxins during spring or summer of 2015, to assist regulators and water managers as they consider steps to protect the public from unregulated contaminants. U.S. Congress is considering multiple bills related to cyanotoxin monitoring and risk assessment.

"The Toledo incident launched cyanotoxins into the public consciousness," said AWWA President

John Donahue. "This guide will help water managers make informed decisions in how they manage cyanotoxin concerns and communicate effectively with their customers."

"As we look towards the warm days of summer, this new guide presents water utility managers with the right information at the right time to help them confidently apply the best science and best practices to protect the communities they serve," said Robert Renner, WRF's Executive Director.

# COUNTLESS OPPORTUNITIES.

WEFTEC 2015 is the event for water professionals, industry experts, and the most innovative companies from around the world to gather together for the advancement of water.

#### STAY COMPETITIVE

WEFTEC offers the highest-quality, most comprehensive educational sessions available today.

#### DISCOVER THE NEWEST INNOVATIONS AND SOLUTIONS

WEFTEC features the largest water quality exhibition in the world with more than 1,000 exhibiting companies.

#### ACCESS GLOBAL BUSINESS OPPORTUNITIES

WEFTEC is your gateway to global water, wastewater & resource recovery — and the only water conference selected to be a part of the U.S. Commercial Service International Buyer Program.

#### EXPERIENCE SPECIALIZED PAVILIONS

See the latest equipment, services and presentations in focused areas on the exhibit floor, including the Stormwater Pavilion, Innovation Pavilion, and 10 Country Pavilions.

#### MAKE VALUABLE CONNECTIONS

WEFTEC hosts more than 22,000 attendees from around the world and all sectors of water quality.

# Atlas Copco awarded ISO 22000 – Food Safety System Certification – for its production facility in Antwerp

Antwerp, Belgium: Atlas Copco is the first compressor manufacturer to receive ISO 22000 certification by Lloyds Register for its production facility in Antwerp, Belgium, which manufactures state-of-the-art oil-free air compressors, blowers and air treatment products.

In today's modern world where the population is growing and the need for high quality food is increasingly important, regulations on food standards are essential.

ISO 22000 specifies the requirements for a food safety management system where an organization in the food chain needs to demonstrate its ability to control food safety hazards in order to ensure that food is safe at the time of human consumption.

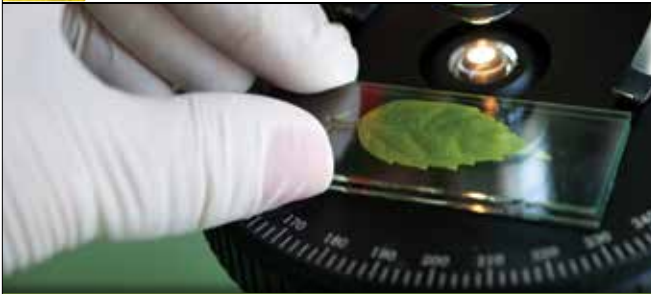

Compressed air comes in many applications in contact with the end-product or even forms an active part of the food, therefore Atlas Copco decided to go for this high class valuable certification.

Most of the leading food manufacturers across the globe are getting more and more stringent about the quality at source and proud to create a benchmark for compressed air industry.

Thanks to this auditable ISO standard with clear requirements, the customer can tangibly rely on Atlas Copco as a compliant compressed air manufacturer for their products and processes.

“We were able to demonstrate after intensive work shops and thoroughly executed audits by Lloyd's Register that Atlas Copco is ready to comply with the highest standards in the food industry with its oil-free compressors. The same HACCP (Hazard Analysis Critical Control Point) and procedures as used in the top quality food companies have been implemented in the design and production of compressors, blowers and dryers. At Atlas Copco, we are committed to sustainable productivity of our customers and we will continue creating positive value for our stakeholders,” said Chris Lybaert, President, Oil-free Air Division.

For more information please contact: Mrs. Chung-Ngy Ung, marketing assistant for Atlas Copco Compressors Canada, division Oil-Free Air [chung-ngy.ung@ca, atlascopco.com](mailto:chung-ngy.ung@ca.atlascopco.com), Phone: 1-514-421-8528.

## ENVIRONMENTAL CHEMISTRY LABORATORY SERVICES

With over 35 years of experience and more than 1,200 employees, AGAT Laboratories offers *PRECISE, ACCURATE* and *RELIABLE* analytical services nationwide.

**ENVIRONMENTAL CHEMISTRY**

- Organic & Inorganic Chemistry
- Ultra-trace & Toxicology
